

# 2. 100% Capital Protection through SIF with strong commission

### Problem:

Inflation is now back on the horizon and investors need to be wary of holding large sums of money on deposit as inflation starts to erode the purchasing power of this cash. As clients begin to move off cash they are increasingly focusing on 100% capital protected products to move back into markets. Across many pension wrappers there is a real lack of strong offerings in this space.

### Solution:

Through the Self Invested Fund (SIF) in Complete Solutions a client can access a strong range of 100% capital protected products through a variety of providers. This choice allows the client options in relation to the term and type of tracker they require.

### Target Market:

- Clients sitting in cash who are looking to move back into markets through a 100% capital protected structure.
- Clients who do not have access to 100% capital protected products in their current pension arrangement.

### Irish Life Support:

- Broker mail letter available on b-line or via your Account Manager
